

# 4 Angles in Triangles

October 4, 2020 5:08 PM

FOM 11: Ch 2 Geometry

Day 4: Angle Properties in Triangles

**Investigation:** The sum of interior angles in a triangle is

Prove it by cutting off the angles in the triangle and then putting them together!

© MAZIK ANDERSON

Today we explore exterior angles!

Exterior Angle: an  $\angle$  formed by 1 side of a polygon + by extending the adjacent side

**Investigation:** Take a triangle, mark the  $a$ ,  $b$ , and  $c$  angles. Tear off opposite interior angles,  $a$  and  $b$ . How can you use  $a$  and  $b$  to determine the measure of exterior angle  $d$ ? of  $c$ ?

$\rightarrow 2:00$

$$\angle D = \angle A + \angle B$$

exterior  $\angle$

opposite (non-adjacent) interior  $\angle$ 's

Ms. Kamber

**Example 1:** Find the measure of indicated angle.

© 2016 MathGeekMama.com

**Example 2:** Find the measure of indicated angle.

**Example 3:** Find  $x$  and the use it to find the measures of  $\angle A$  and  $\angle B$ .

$$\angle A + \angle B = \angle C \text{ ext.}$$

$$(6x+3) + (7x+3) = 136$$

$$13x + 6 = 136$$

$$\begin{array}{r} 13x = 130 \\ \underline{13} \quad \quad \underline{13} \end{array}$$

$$x = 10$$

$$\angle A = 6x + 3 = 6(10) + 3 = 63^\circ$$

$$\angle B = 7x + 3 = 7(10) + 3 = 73^\circ$$

**Example 4:** Find  $x$  and the use it to find the measures of  $\angle B$  and  $\angle C$ .

$$\angle A = \angle B + \angle C$$

ext      opp. int

$$139^\circ = 4x + 3x - 1$$

$$139^\circ = 7x - 1$$

$$\begin{array}{r} 140^\circ = 7x \\ \underline{7} \quad \quad \underline{7} \end{array}$$

$$x = 20$$

$$\angle B = 4x = 4(20) = 80^\circ$$

$$\angle C = 3x - 1 = 59^\circ$$

Ms. Kamber

**Example 5:** Find  $x$  and use it to find the measures of  $\angle A$  and  $\angle B$ .

$$\text{OR } (2x+4) + (x+1) + 55 = 180$$

$$(2x+4) + (x+1) = 125$$

$$\begin{array}{r} 3x + 5 = 125 \\ -5 \quad -5 \\ \hline 3x = 120 \end{array}$$

$$\frac{3x}{3} = \frac{120}{3}$$

$$\boxed{x = 40}$$

$$\begin{aligned} \angle A &= 2x+4 \\ &= 2(40)+4 \\ &= \boxed{84^\circ} \end{aligned}$$

$$\begin{aligned} \angle B &= x+1 \\ &= 40+1 \\ &= \boxed{41^\circ} \end{aligned}$$

www.lmathworksheets.com

**Example 6:** Make up your own question involving an exterior angle!

**Example 7:** Determine  $\angle 1$ ,  $\angle 2$ ,  $\angle 3$ , and  $\angle 4$ .

$$\angle 2 = 180^\circ - 90^\circ - 25^\circ = 65^\circ$$

$$\angle 5 = 60^\circ \text{ alt. int. to } 60^\circ$$

$$\begin{aligned} \angle 4 &= 180^\circ - \angle 5 \\ &= 180^\circ - 60^\circ \\ &= 120^\circ \end{aligned}$$

$$\begin{aligned} \angle 1 &= 180^\circ - 60^\circ - 65^\circ \\ &= 55^\circ \checkmark \end{aligned}$$

### Assignment:

- "What do you call a cook that leaves Arby's to work at McDonalds?"
- Triangles Sheet: #1-3, 4 or 10, 5-8, 11.

Ms. Kamber
